SUR - International Journal On Human Rights is a biannual journal published in English, Portuguese and Spanish by Conectas Human Rights. It is available on the Internet at <<http://www.surjournal.org>>

SUR is covered by the following abstracting and indexing services: IBSS (International Bibliography of the Social Sciences); ISN Zurich (International Relations and Security Network); DOAJ (Directory of Open Access Journals) and SSRN (Social Science Research Network). In addition, SUR is also available at the following commercial databases: EBSCO, HEINonline, ProQuest and Scopus. SUR has been rated A1 and B1, in Colombia and in Brazil (Qualis), respectively.

INTRODUCTION

HUMAN RIGHTS IN MOTION: A MAP TO A MOVEMENT'S FUTURE

Lucia Nader (Executive Director, Conectas)
Juana Kweitel (Program Director, Conectas)
Marcos Fuchs (Associate Director, Conectas)

Sur Journal was created ten years ago as a vehicle to deepen and strengthen bonds between academics and activists from the Global South concerned with human rights, in order to magnify their voices and their participation before international organizations and academia. Our main motivation was the fact that, particularly in the Southern hemisphere, academics were working alone and there was very little exchange between researchers from different countries. The journal's aim has been to provide individuals and organizations working to defend human rights with research, analyses and case studies that combine academic rigor and practical interest. In many ways, these lofty ambitions have been met with success: in the past decade, we have published articles from dozens of countries on issues as diverse as health and access to treatment, transitional justice, regional mechanisms and information and human rights, to name a few. Published in three languages and available online and in print for free, our project also remains unique in terms of geographical reach, critical perspective and its Southern 'accent'. In honour of the founding editor of this journal, **Pedro Paulo Poppovic**, the 20th issue opens with a biography (by João Paulo Charleaux) of this sociologist who has been one of the main contributors to this publication's success.

This past decade has also been, in many ways, a successful one for the human rights movement as a whole. The Universal Declaration of Human Rights has recently turned 60, new international treaties have been adopted and the old but good global and regional monitoring systems are in full operation, despite criticisms regarding their effectiveness and attempts by States to curb their authority. From a strategic perspective, we continue to use, with more or less success, advocacy, litigation and naming-and-shaming as our main tools for change. In addition, we continue to nurture partnerships between what we categorize as local, national and international organizations within our movement.

Nevertheless, the **political and geographic coordinates** under which the global human

rights movement has operated have undergone profound changes. Over the past decade, we have witnessed hundreds of thousands of people take to the streets to protest against social and political injustices. We have also seen emerging powers from the South play an increasingly influential role in the definition of the global human rights agenda. Additionally, the past ten years have seen the rapid growth of social networks as a tool of mobilization and as a privileged forum for sharing political information between users. In other words, the journal is publishing its 20th issue against a backdrop that is very different from that of ten years ago. The protests that recently filled the streets of many countries around the globe, for example, were not organized by traditional social movements nor by unions or human rights NGOs, and people's grievances, more often than not, were expressed in terms of social justice and not as rights. Does this mean that human rights are no longer seen as an effective language for producing social change? Or that human rights organizations have lost some of their ability to represent wronged citizens? Emerging powers themselves, despite their newly-acquired international influence, have hardly been able – or willing – to assume stances departing greatly from those of “traditional” powers. How and where can human rights organizations advocate for change? Are Southern-based NGOs in a privileged position to do this? Are NGOs from emerging powers also gaining influence in international forums?

It was precisely to reflect upon these and other pressing issues that, for this 20th issue, SUR's editors decided to enlist the help of over 50 leading human rights activists and academics from 18 countries, from Ecuador to Nepal, from China to the US. We asked them to ponder on what we saw as some of the most urgent and relevant questions facing the global human rights movement today: 1. Who do we represent? 2. How do we combine urgent issues with long-term impacts? 3. Are human rights still an effective language for producing social change? 4. How have new information and communication technologies influenced activism? 5. What are the challenges of working internationally from the South?

The result, which you now hold in your hands, is a **roadmap for the global human rights movement** in the 21st century – it offers a vantage point from which it is possible to observe where the movement stands today and where it is heading. The first stop is a reflection on these issues by the founding directors of Conectas Human Rights, **Oscar Vilhena Vieira** and **Malak El-Chichini Poppovic**. The roadmap then goes on to include **interviews** and **articles**, both providing in-depth analyses of human rights issues, as well as **notes from the field**, more personalized accounts of experiences working with human rights, which we have organized into **six categories**, although most of them could arguably be allocated to more than one category:

Language. In this section, we have included articles that ponder the question of whether human rights – as a utopia, as norms and as institutions – are still effective for producing social change. Here, the contributions range from analyses on human rights as a language for change (**Stephen Hoggood** and **Paulo Sérgio Pinheiro**), empirical research on the use of the language of human rights for articulating grievances in recent mass protests (**Sara Burke**), to reflections on the standard-setting role and effectiveness of international human rights institutions (**Raquel Rolnik**, **Vinodh Jaichand** and **Emílio**

Álvarez Icaza). It also includes studies on the movement's global trends (**David Petrusek**), challenges to the movement's emphasis on protecting the rule of law (**Kumi Naidoo**), and strategic proposals to better ensure a compromise between utopianism and realism in relation to human rights (**Samuel Moyn**).

Themes. Here we have included contributions that address specific human rights topics from an original and critical standpoint. Four themes were analysed: economic power and corporate accountability for human rights violations (**Phil Bloomer, Janet Love and Gonzalo Berrón**); sexual politics and LGBTI rights (**Sonia Corrêa, Gloria Careaga Pérez and Arvind Narrain**); migration (**Diego Lorente Pérez de Eulate**); and, finally, transitional justice (**Clara Sandoval**).

Perspectives. This section encompasses country-specific accounts, mostly field notes from human rights activists on the ground. Those contributions come from places as diverse as Angola (**Maria Lúcia da Silveira**), Brazil (**Ana Valéria Araújo**), Cuba (**María-Ileana Faguaga Iglesias**), Indonesia (**Haris Azhar**), Mozambique (**Salvador Nkamate**) and Nepal (**Mandira Sharma**). But they all share a critical perspective on human rights, including for instance a sceptical perspective on the relation between litigation and public opinion in Southern Africa (**Nicole Fritz**), a provocative view of the democratic future of China and its relation to labour rights (**Han Dongfang**), and a thoughtful analysis of the North-South duality from Northern Ireland (**Maggie Beirne**).

Voices. Here the articles go to the core of the question of whom the global human rights movement represents. **Adrian Gurza Lavalle** and **Juana Kweitel** take note of the pluralisation of representation and innovative forms of accountability adopted by human rights NGOs. Others study the pressure for more representation or a louder voice in international human rights mechanisms (such as in the Inter-American system, as reported by **Mario Melo**) and in representative institutions such as national legislatures (as analysed by **Pedro Abramovay and Heloisa Griggs**). Finally, **Chris Grove**, as well as **James Ron, David Crow and Shannon Golden** emphasize, in their contributions, the need for a link between human rights NGOs and grassroots groups, including economically disadvantaged populations. As a counter-argument, **Fateh Azzam** questions the need of human rights activists to represent anyone, taking issue with the critique of NGOs as being overly dependent on donors. Finally, **Mary Lawlor and Andrew Anderson** provide an account of a Northern organization's efforts to attend to the needs of local human rights defenders as they, and only they, define them.

Tools. In this section, the editors included contributions that focus on the instruments used by the global human rights movement to do its work. This includes a debate on the role of technology in promoting change (**Mallika Dutt and Nadia Rasul**, as well as **Sopheap Chak and Miguel Pulido Jiménez**) and perspectives on the challenges of human rights campaigning, analysed provocatively by **Martin Kirk** and **Fernand Alphen** in their respective contributions. Other articles point to the need of organizations to be more grounded in local contexts, as noted by **Ana Paula Hernández** in relation to Mexico, by **Louis Bickford** in what he sees as a convergence towards the global middle, and finally by **Rochelle Jones, Sarah Rosenhek and Anna Turley** in their movement-support model. In addition, it is noted by **Mary Kaldor** that NGOs are not the same as civil society,

properly understood. Furthermore, litigation and international work are cast in a critical light by **Sandra Carvalho and Eduardo Baker** in relation to the dilemma between long and short term strategies in the Inter-American system. Finally, **Gastón Chillier and Pétalla Brandão Timo** analyse South-South cooperation from the viewpoint of a national human rights NGO in Argentina.

Multipolarity. Here, the articles challenge our ways of thinking about power in the multipolar world we currently live in, with contributions from the heads of some of the world's largest international human rights organizations based in the North (**Kenneth Roth** and **Salil Shetty**) and in the South (**Lucia Nader, César Rodríguez-Garavito, Dhananjayan Sriskandarajah** and **Mandeep Tiwana**). This section also debates what multipolarity means in relation to States (**Emilie M. Hafner-Burton**), international organizations and civil society (**Louise Arbour**) and businesses (**Mark Malloch-Brown**).

Conectas hopes this issue will foster debate on the future of the global human rights movement in the 21st century, enabling it to reinvent itself as necessary to offer better protection of human rights on the ground.

Finally, we would like to emphasize that this issue of Sur Journal was made possible by the support of the Ford Foundation, Open Society Foundations, the Oak Foundation, the Sigrid Rausing Trust, the International Development Research Centre (IDRC) and the Swedish International Development Cooperation Agency (SIDA). Additionally, Conectas Human Rights is especially grateful for the collaboration of the authors and the hard work of the Journal's editorial team. We are also extremely thankful for the work of Maria Brant and Manoela Miklos for conceiving this Issue and for conducting most of the interviews, and for Thiago Amparo for joining the editorial team and making this Issue possible. We are also tremendously thankful for Luz González's tireless work with editing the contributions received, and for Ana Cernov for coordinating the overall editorial process.

DAVID PETRASEK

David Petrasek is an Associate Professor at the Graduate School of Public and International Affairs, University of Ottawa. Formerly Special Adviser to the Secretary-General of Amnesty International, David has worked extensively on human rights, humanitarian and conflict resolution issues, including for Amnesty International (1990-96), for the Office of the UN High Commissioner for Human Rights (1997-98), for the International Council on Human Rights Policy (1998-02), and as Director of Policy at the HD Centre (2003-07). He has taught international human rights and/or humanitarian law courses at the Osgoode Hall Law School, the Raoul Wallenberg Institute at Lund University, Sweden, and at Oxford University. David has also worked as a consultant or adviser to several NGOs and UN agencies.

ABSTRACT

Global power shifts are only one of many trends likely to impact the future of efforts to secure the protection of human rights. A burgeoning 'global trends' literature points to both risks and opportunities for human rights advocates, as they will work in a world that is increasingly more urban, more connected, and better educated, while at the same time under greater environmental and political stress.

ARTICLE

GLOBAL TRENDS AND THE FUTURE OF HUMAN RIGHTS ADVOCACY*

David Petrasek

What is the future for human rights? In recent years, as global economic and political power is perceived to be shifting, and as western power appears to be in decline, this question is increasingly discussed. For the most part, however, the discussion takes place only within a narrow framework that weighs the importance of this power shift, both for emerging threats to human rights and for advocacy efforts.¹ Yet the perceived global power shift is only one of many trends that might shape the 21st century, and arguably not of primary importance when considering the future of human rights. Trends in the areas of population growth, migration, education, poverty levels, women's empowerment, global economic integration, urbanization, technological development and many more will all shape profoundly the future of human rights. A burgeoning literature is devoted to identifying these trends, produced by a range of actors.² While its predictive value is contested,³ the various studies do point to a number of likely scenarios that pose both opportunities and challenges for the protection of human rights. The purpose of this paper, therefore, is to summarize the trends identified in a range of studies, and draw out the points that are likely to be of most interest to those considering the future of human rights.

1 Global trends – a snapshot

By way of introduction, it is worth noting that across a range of studies there is convergence on a surprising number of points. Looking ahead 20-30 years,⁴ the world is almost certainly going to be more urban and more middle class, better educated and better connected (to information, but also to each other), more migratory and, individually, more empowered. It is also likely to be a world where traditional forms of government (whether authoritarian or democratic) are

*Graeme Cook provided valuable research and writing assistance.

challenged, and where security concerns will continue to dominate. It will be a hotter world, and, absent major technological breakthroughs, with fewer of the natural resources that sustain human life.

Such a future, even if sketched out at this macro level, will obviously have many consequences for the protection of human rights, some clearly positive, such as increased education levels, and others, like resource scarcity, apt to lead to gloomier outcomes. The following paragraphs will summarize these key trends in more detail. Following that, a concluding section suggests a number of issues emerging that are of most immediate relevance to those pondering the future of human rights advocacy.

Looking first at technology, progress in four areas will be important: information and communications technology (ICT); automation and advanced manufacturing technology (that may dramatically alter existing global supply chains); resource technologies (for example, breakthroughs in securing food, water and energy supplies through new technologies or advancements in agriculture); and life sciences and health technology (NATIONAL INTELLIGENCE COUNCIL, 2012, p. 83). The enormous impact in the past two decades of ICT technology suggests that breakthroughs in any of these areas may have truly global and far-reaching impacts. Some predict a wave of technological development in the area of life sciences (ROLAND BERGER STRATEGY CONSULTANTS, 2011, p. 94). New technologies in the areas of biotechnology, nanotechnology, and genetics will likely raise profound ethical questions, including about what it means to be 'human'. Increasing diffusion of ICT will mean both individuals and governments become more able and adept at manipulating information on the Internet, even as rights to privacy and free expression come under new and increased pressures.

Turning to social issues, all major studies identify key trends in education, urbanization, migration and demographics. Education and literacy rates will continue to rise, along with the global average of years of education completed. By 2030, studies suggest 91% of the global population will complete primary education, and 55% will complete secondary or higher education (ROLAND BERGER STRATEGY CONSULTANTS, 2011, p. 105). Women are also narrowing the educational gap around the world.⁵ A growing global middle class will drive the demand for education; and it will be more easily met as demographic pressures on education are falling almost everywhere, as the size of the school-age population declines relative to the working age population (HUGHES; DICKSON; IRFAN, 2010, p. 79).

Increased educational levels, of course, impact positively on social and economic outcomes; higher education rates for women, for example, lead to greater labour force participation (EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM; INSTITUTE FOR SECURITY STUDIES, 2012, p. 74). Further, a more literate world, and one that is better educated, suggests more people will be more aware of their rights, and perhaps better equipped to claim and defend them (a point returned to below).

Growing urbanization is also noted by all of the major studies. By 2030, the majority of the population in most countries will live in cities, as urbanization

rates grow (especially in Africa and Asia) to approximately 60% worldwide, from 40% only a few years ago (NATIONAL INTELLIGENCE COUNCIL, 2012, p. 26; EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM; INSTITUTE FOR SECURITY STUDIES, 2012, p. 134). Large cities will carry increasing economic and political clout (EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM; INSTITUTE FOR SECURITY STUDIES, 2012, p. 134). As cities grow so too will slums; there will be an estimated two billion slum-dwellers by 2040, double the number today (EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM; INSTITUTE FOR SECURITY STUDIES, 2012, p. 46; UNITED KINGDOM, 2010, p. 12).

Migration from the countryside will drive urban growth, but migrants will also cross borders. It is estimated 405 million people (not including refugees) will live outside their country by 2050, more than double the number today (INTERNATIONAL ORGANIZATION FOR MIGRATION, 2010, p. 1). There will also be a significant increase in temporary and circular migration. Labour shortages in many developed countries (NATIONAL INTELLIGENCE COUNCIL, 2012, p. 24), wealth disparities across countries (INTERNATIONAL COUNCIL ON HUMAN RIGHTS POLICY, 2007, p. 46) and political instability and climate change will all drive migration. The number of those displaced (mostly internally) due to climate change may reach 200 million by 2050, though it could be much higher (INTERNATIONAL ORGANIZATION FOR MIGRATION, 2010, p. 2).

By 2030 the global population will have reached approximately 8.3 billion people, up from 6.9 billion today (INTERNATIONAL ORGANIZATION FOR MIGRATION, 2010, p. 20). Widespread population ageing will accompany this growth as life expectancy increases; the median age of the population in most countries in the world (with the exception of sub-Saharan Africa, and possibly South Asia) will rise. Most population growth will be in the global south – by 2030, roughly seven billion people will live in developing countries, comprising 85% of the world's population (ROLAND BERGER STRATEGY CONSULTANTS, 2011, p. 22).

Population ageing may have several impacts including: labour shortages that pull migrants to developed countries; the privatization of government services as pension liabilities and the rising costs of medical care create fiscal challenges for governments; an increased burden on caregivers, who will be predominantly female; and increased demand for migrant carers, who are not always well-protected in law.

In considering these social and technological trends, many of the reports suggest the result will be increasing individual empowerment, an idea that describes the growing importance of the individual relative to the State, organizations and society as a whole. This importance stems from the proliferation of ICT technology, already noted. It is projected, for example, that the number of mobile-only Internet users will rise from roughly 14 million in 2010 to close to 5 billion in 2030 (ROLAND BERGER STRATEGY CONSULTANTS, 2011, p. 86). But individual empowerment will also be driven by a rapidly growing global middle class – estimated to rise from 1 billion today to 3 billion or more by 2030 (depending on one's definition of 'middle class') (NATIONAL INTELLIGENCE COUNCIL, 2012, p. 8). The diffusion of ICT is closely related to income, thus another driver of individual empowerment is the changing consumption patterns of the growing middle class (NATIONAL

INTELLIGENCE COUNCIL, 2012, p. 30). Increasing access to education and rising literacy rates will also lead to greater individual empowerment (EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM; INSTITUTE FOR SECURITY STUDIES, 2012, p. 28). Further, rising education rates fuel economic development, which in turn fuels demand for more education (NATIONAL INTELLIGENCE COUNCIL, 2012, p. 10).

Turning to economic and political trends, clear outcomes are perhaps less certain. The rise in the economic and political power of countries in the global east and south (BRICs plus many others) has been widely noted. Continued global economic integration is also likely (ROLAND BERGER STRATEGY CONSULTANTS, 2011, p. 38),⁶ and that means global economic instability may increase too. Most trend reports agree that while abject poverty will decrease as economies develop and middle classes grow, economic inequality (a relative measure) will grow. Additionally, while abject poverty will decrease in Africa, Asia and Latin America, this will not necessarily reduce the absolute number of 'new poor' (SCHINAS, 2012, p. 271). Although many African countries stand to benefit from a large demographic dividend, extreme poverty levels in sub-Saharan Africa will remain high to 2050 (CILLIERS; HUGHES; MOYER, 2011, p. 32). The causes of increased inequality include weak and unequal education systems, as well as the prevalence of disease and corruption in many developing countries (EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM; INSTITUTE FOR SECURITY STUDIES, 2012, p. 77). Shrinking budgets will curtail the ability of governments to redistribute wealth. Inequality could further be exacerbated by migration patterns, as cheap labour flocks to cities and across borders. There will be inequalities too in access to resources, including food and water.

The diffusion of economic and political power, the increasing importance of regions (like the European Union (EU)) in global governance and the increasing growth and hence power of cities are all likely to contribute to the waning importance of centralized state power (NATIONAL INTELLIGENCE COUNCIL, 2012, p. 54). This may lead to the reform of the major international organizations, including the UN, the WTO and IMF as well as their increasing cooperation with regional institutions in the realm of global governance (INSTITUTE OF WORLD ECONOMY AND INTERNATIONAL RELATIONS, 2011, p. 10). Regions, and regional institutions, may become more important building blocks in global governance. As regional integration grows, some of the trend reports see the creation of more regional institutions of supranational sovereignty such as the EU. As cities grow in influence, they will pull political and economic power away from the traditional state level to the sub-national level (NATIONAL INTELLIGENCE COUNCIL, 2012, p. 54).

Demographic pressures and increasing budget deficits will contribute to the failure of governments to deliver on the demands of an increasingly interconnected citizenry; more disillusionment in central government is likely. Corruption, privatization and the slow responsiveness of state institutions will exacerbate this trend (INTERNATIONAL COUNCIL ON HUMAN RIGHTS POLICY, 2007 p. 48). Some studies suggest an emerging "governance gap" will result, and the importance

of traditional party politics and governance structures will decline (EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM; INSTITUTE FOR SECURITY STUDIES, 2012, p. 14). Governments will be challenged to modernize and respond to increased demands for participation, while facing diminished capability to regulate public life and redistribute resources. Some governments may meet this challenge, but worst-case scenarios predict instead the breakdown of state structures and the advance of organized criminal networks (EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM; INSTITUTE FOR SECURITY STUDIES, 2012, p. 97).

Increasing economic and social inequality, marginalization, and disillusionment with central government may exacerbate conflicts related to self-determination, political autonomy and self-government (EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM; INSTITUTE FOR SECURITY STUDIES, 2012, p. 39). Tensions may be spread and shared through the diffusion of ICT, and the waning importance of traditional and central state authority may make it easier for new States to break away.

As regards security trends, it is likely that many aspects of government policy will continue to be thought of and formulated in terms of security. This will especially be driven by the wider access of non-state actors to lethal and disruptive technologies, including chemical, biological, radiological and nuclear (CBRN) weapons (NATIONAL INTELLIGENCE COUNCIL, 2012, p. 64). Further, a well-executed cyber-attack could cripple economies and disrupt global interactions in trade and finance. As systems become more interconnected, the costs of such an attack will only increase (WORLD ECONOMIC FORUM, 2013, p. 6). States will most likely use increasingly sophisticated ICT to monitor their populations and control and censor information (as is already apparent). The military balance of power in some regions may shift as more States gain access to CBRN.

Finally, turning to environmental and resource trends, the most obvious (and most commented on) is anthropogenic climate change, acknowledged as a real and growing risk in almost every report studied, including forecasts from the energy sector. The consequences of a warmer planet and more severe natural disasters are grim. Food and water pressures will increase. Threats to public safety will increase too and living standards may decline in hard-hit areas due to rising temperatures and severe storms, general environmental degradation and an increase in humanitarian disasters (EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM; INSTITUTE FOR SECURITY STUDIES, 2012, p. 81). These effects will be felt most severely in China, South Asia and the Sahel, where resource pressures will also be highest.

By 2030, demand for food will rise by at least 35%, demand for water, by at least 40%, and at least half of the world will live in areas suffering from severe water stress (NATIONAL INTELLIGENCE COUNCIL, 2012, p. 10). States in Africa and the Middle East are the most vulnerable to food and water shortages, but China and India could be affected as well. Demand for energy is expected to rise by 50%, due to changing consumption patterns as the global middle class grows and consumes more (ROLAND BERGER STRATEGY CONSULTANTS, 2011, p. 75). Additionally, growth rates in world agricultural production will slow and may even fall due to climate change. Agricultural production will also be threatened

due to water scarcity (ROLAND BERGER STRATEGY CONSULTANTS, 2011, p. 62).

Access to safe water will improve (to 86% of all people by 2015), but there will be an enormous gap between rural and urban areas: eight out of ten people without access to safe drinking water will live in rural areas (ROLAND BERGER STRATEGY CONSULTANTS, 2011, p. 59). High levels of water pollution in developing countries, caused primarily by rapid urbanization and unsustainable agricultural practices, will only be partially mitigated by 2030. This is particularly important, as dirty water is the source of up to 80% of the total disease burden in some developing countries (WATER..., 2009).

2 The future of human rights

The foregoing is only a partial look at key trends, largely ignoring, for example, important developments in the diffusion of global political power and trends in relation to the prevalence of violence and armed conflict. Nevertheless, even this partial analysis suggests a number of important issues that ought to be considered by human rights organizations when formulating plans for future work. As noted at the beginning, identifying a trend does not necessarily translate into predicting a definitive outcome. Many of the trends identified might have either beneficial or detrimental consequences for human rights, and most likely—for a number of trends—it will be a combination of both. For example, urbanization may improve access to education and basic health care, but where it entails living in slums, it will likely expose people to new forms of violence and insecurity.

Two sets of issues arise: first, what do the trends suggest about emerging human rights concerns, and second, what impact might they have on advocacy efforts? A particular trend may pose a new threat to human rights, even as it provides new opportunities for those working to protect human rights—for example, the advances in ICT.

Looking first at impacts on the enjoyment of human rights, positive outcomes include increased access to education, because it is the fulfilment of a basic human right, but also because there is a strong correlation between education levels and development gains, especially where girls are completing school. Further, education equips individuals to be much greater masters of their own fate—better able to engage in political life and better able to find shelter, food and employment security. The notion of the ‘empowered individual’—because of education, but also because of the availability of and access to ICT—captures this sense of being less at the mercy of traditional and political authority. Linked to this, of course, is the likelihood that the proportion of people living in extreme forms of poverty will decrease; and increases in life expectancy point to improved access to the right to health.

Other positive outcomes may arise from the growth in the urban population, which may improve access to basic human rights, including secondary education and health care. Even if much of the growth in urban population will be in marginal and sub-standard housing and in slums, it will be easier to provide such services than it would be in rural areas.

Enhanced access to ICT may make it easier for people to exercise basic civil and political rights—to organise, associate and assemble, and to free expression. Certainly access to information will be easier, even if governments grow more sophisticated in forms of censorship.

If power is decentralised to sub-state levels, in theory political participation should be enhanced as decision-making moves closer to the people affected. Too many human rights demands are placed on central state authorities and it would likely improve the realisation of many rights if sub-state authorities (regional, provincial, municipal) were identified more explicitly as duty-holders (and engaged as such by national and international actors).

Other technological advances, for example in the life sciences, may dramatically improve our ability to diagnose and treat disease, but whether this will produce overall positive effects will depend on the extent to which there is equitable access to such technology.

Regarding negative outcomes, security, environment and resource trends are all particularly worrying regarding their likely impacts on the enjoyment of human rights. The human rights impacts of climate change seem clear enough—forced displacement, increasing difficulties in access to basic necessities, threats to lives and livelihoods (from natural disasters and degraded or lost agricultural land)—although the precise timescale and the areas of highest impact are debated.

Increasing attention to security, and advances in ICT that make surveillance easier, will challenge rights to privacy and basic civil rights like expression and assembly. There is likely to be a continuing expansion of the situations in which people who pose perceived threats can be killed rather than arrested, as the rules normally applicable in war are increasingly applied whenever state security is threatened. Threats posed by the diffusion of CNBW to non-state actors mean it is likely States will resort more often to derogation and the use of exceptional powers.

If trends in resource depletion are accurate, and climate change looks likely to accelerate these, then the question of equitable access to these resources will grow in importance. Where such resources are essential to support and maintain human life, then it is similarly likely that the debate will implicate rights to water, to land, to food—and to access to advances in technology that mitigate or overcome the effects of depletion.

In relation to demographic issues, perhaps the most significant will be the doubling of the population living in slums. As noted, the growth of slums is not uniformly negative for human rights, but there are numerous human rights challenges arising for people living in slums, far beyond the narrow issue of their inadequate housing. These include the threat of criminal and domestic violence, denials of basic rights to water, sanitation, etc., inequitable treatment by municipal authorities, arbitrary treatment by the police, denial of public participation rights, arbitrary interference with property rights and more. If demographic and migratory predictions are accurate, over 20% of humanity will live in a slum by 2030. This suggests a clear prioritization for human rights work.

Forecasts in relation to migration suggest a doubling of those who will be living outside their country of citizenship by 2040 (not including refugees nor

those displaced across borders by climate change), and the debate will intensify over the permissible limits on the rights of non-citizens. It is likely that a significant proportion of these new migrants will be temporary or irregular. Most often irregular and temporary migrants are excluded in important ways from the normal, domestic constitutional guarantees, and thus international human rights protections are of crucial importance to these groups. There will likely be an increase in the human rights abuses associated with temporary and/or irregular migration: discrimination in employment and access to services (education, health, social security); denial of political rights; arbitrary detention; denial of rights to privacy and family life, questions of equality before the law, etc. Within migrant populations, women, children and visible minorities will be most at risk. Human trafficking may grow, simply because more people will be on the move and it will be harder for governments to counter.

In terms of the groups most affected, one can expect that disadvantaged and discriminated groups will be most at risk in any scenario involving declining resources and conflict. The rights of the elderly will grow in importance. Slum populations, migrants and the displaced will all be at particular risk. Though the number of people living in extreme poverty will decline, significant pockets will remain, even in the new middle-income countries.

Secondly, what do these various trends point to, in terms of work to promote and protect human rights? Will it be easier or harder to win acceptance for human rights claims? As noted, advances in education, especially at post-primary levels, a growing middle class, and greater access to information and the means of communication could all point to greater individual empowerment. This could improve the individual capacity (and proclivity) to know, claim and defend rights—and this might be true for hundreds of millions of people. If accurate, the projection that 5 billion people will have mobile access to the Internet by 2020 is particularly breath-taking in the possible implications it will have on social change and mobilization. Greater access to information, and the greater difficulties those in power will face in restricting this access, could signal major new exposure to and interest in human rights.

Urbanization trends may further increase the interest in human rights and the capacity of people to organise in defence of their rights, as will increasing migration, as migrants too often fall outside domestic legal protections and must look to international standards (and ‘human’—not citizen—rights) for protection.

Yet, a greater interest in and demand for the protection and fulfilment of human rights might arise precisely at a time when central governments have a weakened capacity to respond effectively. Human rights are claims on power and as power diffuses so too must human rights advocacy. This is already apparent in the way human rights NGOs have placed demands on armed groups, development agencies, religious authorities and transnational corporations, and this ‘advocacy beyond the state’ is likely to grow in importance. But even within the state, work to promote and protect human rights will increasingly need to shift its attention to sub-state levels of authority—provincial, regional, municipal—where power is actually being exercised. Further, where regional economic and/or political bodies,

like the European Union, assume real powers of decision, then they, too, will need to be the objects of greater advocacy efforts.

Although this paper has not addressed the impact on human rights advocacy of global power shifts, it should be said that these shifts—and the multipolar world they point to—will likely deepen tension, mistrust and animosity between North and South, West and East. This will certainly impact the manner in which human rights issues arise and are resolved in international relations. In short, for those working to promote and protect human rights at an international level, it is unlikely to get any easier.

NOTES

1. The author addressed this question in a previous issue of the journal, see David Petrasek (2013).
2. Large global trend reports are published by intelligence agencies in the United States (US), the European Union (EU), Russia, and elsewhere, by a range of think tanks and by specialized international organizations in their fields of concern. Corporations, especially energy companies, also engage in forecasting and scenario planning exercises. The quality of these reports varies. The US's National Intelligence Council's (NIC) *Global Trends 2030* is one of the most cited and most comprehensive, and is relied on heavily in this report (NATIONAL INTELLIGENCE COUNCIL, 2012), as are two other reports: the European Policy and Strategy Analysis System (ESPAS), published with the support of the European Union (EUROPEAN STRATEGY AND POLICY ANALYSIS SYSTEM, 2011); and, as it pulls together trends identified in dozens of other reports, the *Trend Compendium 2030*, published by Roland Berger, a corporate consulting business (ROLAND BERGER STRATEGY CONSULTANTS, 2011). Material is drawn from many other reports and papers (see bibliography).
3. There are some clear limits to the *predictive* value of these reports. First, some trends are much more certain and evidence-based than others, and second, identifying a trend is not the same as predicting an outcome. As regards the first point, global demographic trends are fairly certain, as is a trend towards greater urbanization; the same cannot be said for the likelihood or not of wars over scarce resources, or of global pandemics, or the continued advance of democratic governance. As regards the second point, the knowledge that 60% of the world's population will live in cities by 2030 may be predicted with a fair degree of certainty, but it may or may not result in increased rates of violence against women who are part of that migration, or in the spread of criminal gangs in the slums to which most will migrate.
4. The 20-25 year timeline is that adopted by most global forecasting—far enough ahead to identify what might be truly surprising and novel.
5. Globally, however, full gender parity in education levels will not be achieved until closer to 2060. See Hughes, Dickson and Irfan (2010, p. 83).
6. Two key indicators of economic globalization, FDI growth over GDP growth and exports as a percentage of GDP, will increase. These rates are highest in the developing world, however, as developing economies integrate into the global economy at a faster rate than the developed world. Asia, for example, is expected to overtake the EU as global export leader by 2023. See Roland Berger Strategy Consultants (2011, p. 38).
